

At IB Roof Systems we have seen a lot of changes in the flat roofing industry since 1978 and have gained a lot of knowledge and expertise. We have used this knowledge to bring you the ultimate design and manufactured roofing system for your flat or low-pitched roof. IB Roof Systems technical staff has accumulated decades of experience and have answered countless inquiries, visited thousands of construction sites, and have educated every authorized installer in the most effective use of our products.

IB Roof Systems has roofs over 25 years old and still performing well for their owners. This is due to our tireless effort to stay on the cutting edge of technology of single-ply membrane formulation and manufacturing.

If you choose to install IB Roof Systems products you can share the confidence in knowing that we demand great quality. This is our most important feature. We strive to ensure that everything that goes out of our plants is perfect.

-Larry Stanley
President, IB Roof Systems

Our History

In 1978 IB Roof Systems had the foresight to promote thermoplastic roofing membranes that were foreign to the roofing industry and not as yet readily accepted. Through this foresight and vision IB Roof Systems has joined what has become the fastest growing segment in the roofing industry. What started as a back of the home business is now a multi-million dollar business with a regional manufacturing facility in Eugene, OR and in Dallas, TX.

Our Goal

Our goal is to obtain a significant presence in the industry, so that IB Roof Systems will be a viable and powerful option anytime a low-pitched roofing project is discussed.

Our Commitment

Our Roofing systems shall be developed with renowned quality. So much so that they will become a standard or benchmark that will demand others to follow, at a cost that can be grasped by the market. We will never lower our standards or quality to meet or join a race to be the lowest cost product. The quality of our membrane will cause others to fall short due to comparison.

Our Market

Market changes in institutional and commercial facilities in the past two decades include a growing desire to minimize environmental impact and cut energy-related costs. These changes have increased the need for reflective roofing products that last longer and are recyclable after their service life.

Besides meeting these needs, IB Roof Systems is constantly striving to improve application methods and searching out new technologies to produce even better products in the future.

“ This is our most important feature. We strive to ensure that everything that goes out of our plants is perfect. ”

-Larry Stanley, President, IB Roof Systems

Our Success

“...Two roads diverged in a wood, and I – I took the one less traveled by, and that has made all the difference.” – Robert Frost

IB Roof Systems doesn't always follow the roofing industry or the latest fad. Since 1978 IB Roof Systems has been developing and improving on the best roofing systems.

This philosophy has made IB Roof Systems one of the fastest growing roofing manufactures in the country, having sustained double-digit growth every year over the last decade.

Our Service

IB Roof Systems provides superior service in every aspect of sales, on-site training, order fulfillment, literature, inspection, quality, knowledge and professionalism. We call it our “Total Quality Concept.” Others call it “awe-inspiring.”

Our Promise

No product shall have IB Roof Systems name associated with it until we are confident that it will perform to our stringent standards. Because of this our image in the industry will be of great prominence and we will achieve success one customer at a time.
